

e-Commerce Sales Apps

A reputed and leading supplier of unique and quality healthcare products across India to the doorstep of our valuable customers. E-commerce site is mainly focused on selling products online. The home page covered maximum number of latest products based on all types of categories with the image, price and discount price.

Existing System:

In the existing system the company is selling all their product in retail market. So the company does not have any online store to manage their product selling to their customers. Also calculating commission is a tedious task. The proposed system will overcome all difficulties in the existing system.

Proposed System

In the proposed system is a web based online platform for sales and tracking commission. The administrator can manage their products and track all order items. The administrator will get all the sales items and the commission for each user.

Problem Statement.

This project aims to develop an commission tracking software for distributors with the goal so that it is very easy to sell the products. With the help of this you can carry out commission tracking from their home.

MODULES:

ADMIN PANEL

The admin panel is where all the main operations take place as well as managing to the app provided to the distributors and the website is monitored and managed.

- The admin is responsible for providing the products needed for the distributor to sell to the customers.
- The admin manages the orders received through the online shopping website.
- Admin have the provision to view monthly sales according to area manager.
- Admin can view commission details for each area manager.

- Admin can view the performance of each area manager.

OFFICE

- The office is responsible for the hiring the area managers filtering the most suitable candidate and providing for approval. Once approved of the position of the area manager, the area is assigned to them.
- office have the provision to view monthly sales according to area manager.
- office can view commission details for each area manager.
- office can view the performance of each area manager.

AREA MANAGER

The area managers are responsible for finding distributors and providing them with the supplies of the products to be sold.

- The area managers also keep tab of the products that are sold and receive commission accordingly.
- Through the app that has been created for the distributors the area manager can track the products sold.
- Area manager can view the salary & commission details.
- Area manager can view the stock details of their distributor.

DISTRIBUTOR

The distributors collect the product from the area manager and sell it to the customers.

- Every time a product is sold the stock of the product is updated in the web app.
- Through the app the distributor can update the stock, and in doing so the area manager is able to see the remaining amount of stock. Also, resupply if the stock is over.
